Point Park
\$10 at door
free 18 years
& under

refreshments
served

Please dress warm
and bring your
own seating and
flashlight. In the
case of inclement
weather, watch for an
announcement of a
venue change.

DR. LUCAS BROTZ Cnidaria Scientist, UBC

Jellyfish populations are increasing in numerous ecosystems around the globe. Not surprisingly, these increases are not uniform across time and space. So why are jellyfish increasing in some places and not others? What are the consequences for humans and ecosystems? And what, if anything, can we do to manage or prevent increasing jellyfish blooms? Lucas will tell us about the current research and theories about jellyfish.

ALLISON MOORE Visual Artist, Montreal

Deeply inspired by Saturna from an early age, Allison will show a new video mapping artwork specifically focused on the ocean and jellyfish. In recent years, Allison's major works have been shown in Quebec, Tokyo and Saturna.
